Assessment of risk of salmonellosis from consumption of nuts

Type of nut	Scope	Risk summary (high level)	References
Almond	U.S.	Estimated 78% risk of 1 or more cases/year (based on 5-log reduction treatment)	Danyluk et al., 2006
	North America	Estimated mean risk of <1 case/year (based on 4-log reduction treatment)	Lambertini et al., 2012
	U.S.	Estimated mean risk of <1 case/year (based on 4-log reduction treatment)	Santillana Farakos et al., 2017a
Peanut	U.S.	Estimated mean risk of 0.038 cases/year (based on 5-log reduction treatment)	Casulli et al., 2019
Pecan	U.S.	Estimated mean risk of 529 cases/year for inshell, and 203 cases/year for shelled <1 case/year for product with 3-log reduction treatment	Santillana Farakos et al., 2017b
Pistachio	U.S.	Estimated mean risk of <1 case/year (based on 4-log reduction treatment)	Lambertini et al., 2017
	U.S.	Estimated mean risk of <1 case/year (based on 4-log reduction treatment), and 419 cases/year (based on no treatment)	Santillana Farakos et al., 2018
Walnut	U.S.	Estimated mean risk of 6 cases/year for untreated product, and <1 case/year for product with 3-log reduction treatment	Santillana Farakos et al., 2019
